

PROGRAMMING FUNDAMENTALS.

C++ I.

Create a lab report for the following programming challenge:

PROGRAMMING CHALLENGE

Title:

Menu-Driven Program to Display ASCII Values

Objective:

Write a program that uses functions and a menu to display uppercase and lowercase letters with their corresponding ASCII values.

Challenge Description:

Create a menu-driven program that allows the user to select between displaying uppercase letters, lowercase letters, or exiting the program.

Program Requirements:

1. The program must display the following menu:

MENU

1. Uppercase Letters and ASCII
2. Lowercase Letters and ASCII
3. Exit

2. The user must select an option from the menu.

3. Based on the user's selection:

- Option 1: Call a function that displays uppercase letters (A–Z) with ASCII values.
- Option 2: Call a function that displays lowercase letters (a–z) with ASCII values.
- Option 3: Terminate the program.

4. The program must continue running until the user selects the Exit option.
5. Use a loop to repeatedly display the menu.
6. Use functions to implement:
 - DisplayUppercaseASCII()
 - DisplayLowercaseASCII()
7. Each function must display one letter and its ASCII value per line.

Expected Output Example:

MENU

1. Uppercase Letters and ASCII
2. Lowercase Letters and ASCII
3. Exit

Enter option: 1

A = 65

B = 66

...

Z = 90

Learning Goals:

- Practice function creation and usage.
- Implement menu-driven programs.
- Understand ASCII representation.
- Reinforce loops and control structures.

You must submit two files.

- Lab report: ASCII.pdf.
- C++ Solution: ASCII.cpp.

For your reference, there is a lab report template available in the Blackboard system under Course Content.
